

For quality assurance process planning
and evaluation, project management, and
quality control inspections

COUNT ON CERTIFIED EXPERTS FROM PQS

Whether you're an owner, contractor or fabricator, you know the success of your project requires expertise at every stage—to ensure every piece, part, weldment and contract requirement is reviewed, monitored, tested and validated with careful attention to every detail.

- **Highly trained**, certified and skilled industry professionals
- **Proven experience** in quality assurance processes
- **A scalable team** to handle any stage and size of project
- **Bilingual professionals** with international experience
- **People** who are independently screened and validated
- **Ethical and professional** staffing to represent your company
- **Access to research**, new technologies and current practices

Your project requires the best people, meticulous review and rigorous standards— your project's success demands the people from Project + Quality Solutions

"I had the pleasure of working with Nate and PQS while Vigor was performing substantial new projects with exacting quality standards. Nate brought a world class team together that allowed us to grow our business to another level of success."

-Wayne Graham, COO, Vigor

Rely on our deep industry insight, international experience and highly-skilled team of recognized experts

We've partnered with some of the largest fabrication and construction companies in the aerospace, hydroelectric, nuclear, oil and gas, and infrastructure industries. At any stage of the project, we will represent the project owner, contractor and fabricator to:

-  **Provide oversight** to ensure project requirements are being fulfilled by the contractor or fabricator
-  **Maintain the project schedule** and improve the return on investment
-  **Train and certify** the right people for your project, industry and phase of work
-  **Verify project specifications** are met by the contractor and fabricator including: perform NDT; inspect bolt installation and coating; track inspections and rework; verify material is on-hand; and confirm the schedule is met
-  **Deliver reasonable solutions** to resolve any issues with the fabricator and contractor which could result in costly delays and legal claims
-  **Offer expert witness services** to clients during disputes, claims and lawsuits

As recognized industry experts actively involved with many technical committees and societies, you can rest assured we'll offer insight, current best practices, detailed reporting at every phase, and a sizable reduction in paper reports through the use of advanced software.

Whether a significant nuclear project or a smaller infrastructure project, eliminate the need to qualify and validate professional credentials when you work with us. We'll provide the right people for each phase and every project. They've passed independent background checks, obtained government level security clearance, and been trained, tested and certified for the skills you require.

For success on your next project, contact Nate Lindell to discuss how the extraordinary, dedicated people at PQS will deliver excellence at every stage, on every project, anywhere in the world.
